Take Home Coding Test

Write a command-line program to scrape web data and output into csv format. This problem should take about an hour.

Problem statement

Write a command-line program to scrape the temperature data from the following website, and output it into a csv file:
http://blackdogandmagpie.net/weather/

Scrape the temperature and humidity for "today" and "yesterday," and output them to a csv file.

The output should have the following format:

day	high_temp	low_temp	high_humidity	low_humidity
today				
yesterday
